Liu Yi

Frontend Developer (React)

19year(s) work experience

PROFILE SUMMARY

I am Liu Yi, a 19-year experienced Frontend Developer with expertise in React. With my extensive knowledge and experience in web development, I have successfully developed and implemented various projects for clients. My passion lies in creating user friendly websites that are visually appealing while being highly functional. I have worked on projects ranging from ecommerce sites to corporate websites, ensuring the best possible result for each one of them by paying attention to detail and keeping up with the latest trends. Throughout my career, I have gained a deep understanding of UX/UI principles as well as core web technologies such as HTML5/CSS3/JS which helps me create high quality frontend experiences that meet customer needs. Additionally, I am able to collaborate effectively with other developers and designers within an agile environment to build great products quickly

WORK HISTORY

Alibaba - Frontend Developer

Bilibili - Frontend Developer

JOB PROFILE

1. During my time at Alibaba, I was a Frontend Developer for 19 years. During this period, I developed innovative user interfaces and applications to improve the overall digital

experience of customers. My expertise in HTML5, CSS3 and JavaScript enabled me to create intuitive designs that enhanced the customer's journey through their online activities.

2. At Bilibili, I continued my role as a Frontend Developer for 19 years with an emphasis on developing mobile-friendly websites and apps that improved usability and accessibility across multiple devices. My knowledge of React Native allowed me to build dynamic web experiences on both Android and iOS platforms while ensuring high performance standards were met throughout the process.

JOB RESPONSIBILITIES

1. Experienced in developing user-friendly, interactive and responsive frontend interfaces using React framework.

2. Proficient in HTML5, CSS3, JavaScript (ES6+), AJAX and jQuery technologies to create dynamic web pages.

3. Skilled at creating custom components with React such as forms, buttons, dropdowns etc., for a better user experience.

4. Adept in integrating third-party libraries such as Redux and MobX into applications for state management purposes.

5. Highly knowledgeable of NodeJS server environment to deploy applications on the cloud or local servers efficiently and securely.

6. Proven ability to troubleshoot complex issues related to React components quickly and effectively by debugging code with Chrome Developer Tools or similar toolsets provided by other browsers like Firefox or Safari .

7. Well versed in writing unit tests for React components using popular frameworks like Jest, Enzyme etc., ensuring that applications are tested thoroughly before deployment process begins .

8 Experience working closely with UI/UX designers during development of webpages to ensure that design elements are implemented properly according to the design specifications given by them .

9 Familiarity with version control systems such as
